

data analysis, compliance, learning & consultancy

## Introducing Rio

Rio is an Environmental Social Governance (ESG) platform, developed to drive performance improvement and deliver sustainability...

## Want to get started?

To find out how Rio can support your business to become more sustainable through learning, data analysis and compliance; or to request a Rio demonstration, please contact our team by calling 020 3371 7612 or email us at [hello@dittosustainability.ai](mailto:hello@dittosustainability.ai)

## Sustainability advisory

Our team is a combination of sustainability professionals, software developers, learning designers and industry experts who are passionate about sustainability and driving environmental, social and economic improvement.

Alongside Rio, we provide a range of consulting and advisory services, with a particular specialism in Environmental Social Governance (ESG) and the Circular Economy.

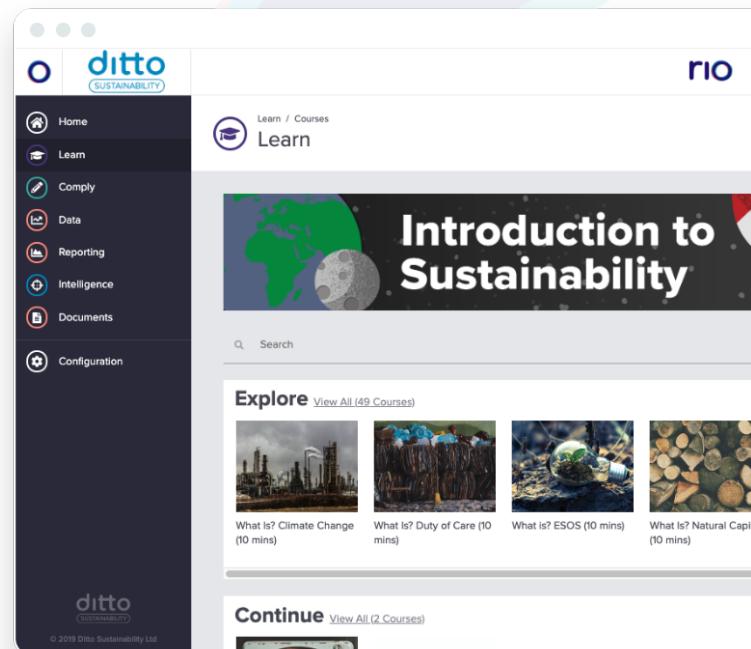

This includes policy and strategy development, auditing and benchmarking, training, employee engagement and behaviour change, technical due diligence and bespoke eLearning development.

Please get in touch with us to find out more.

## Learn

Empower your people with knowledge. Without knowledge, how can we change behaviour?

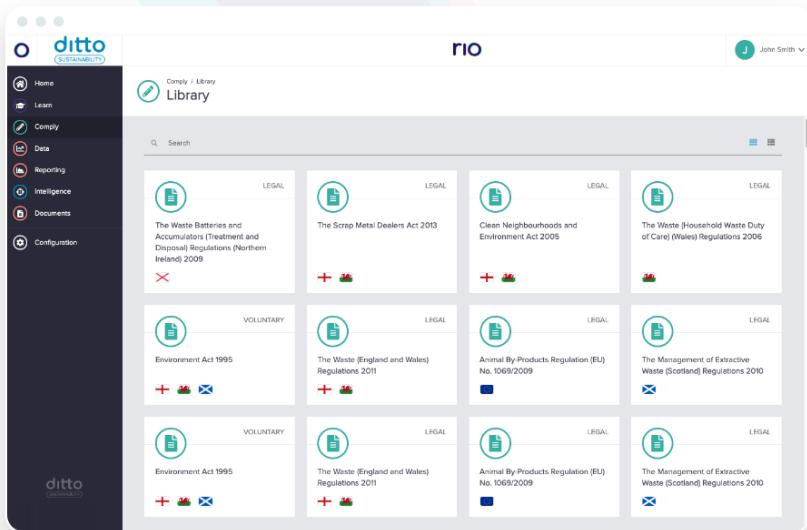

If you are looking to up-skill your company, team or your own sustainability knowledge, then our extensive learning portfolio covers a wide range of sustainability related topics and themes. For beginners to experts, our content is available on demand, anytime and through any device.

# Comply

Our compliance platform provides a truly interactive way to help you understand and monitor your compliance position.

We understand that assessing your compliance position can be a minefield. So we have worked with the best UK, EU and international environmental lawyers to dissect more than 150 pieces of circular economy related legislation and case law. In particular, waste, energy, water and carbon legislation.

## Benefits

- Access market leading knowledge for a fraction of the cost of traditional methods.
- Self sufficiently manage your on-site auditing and compliance processes.
- Build and maintain all the documentation you need to demonstrate compliance internally, and to the appropriate authorities.

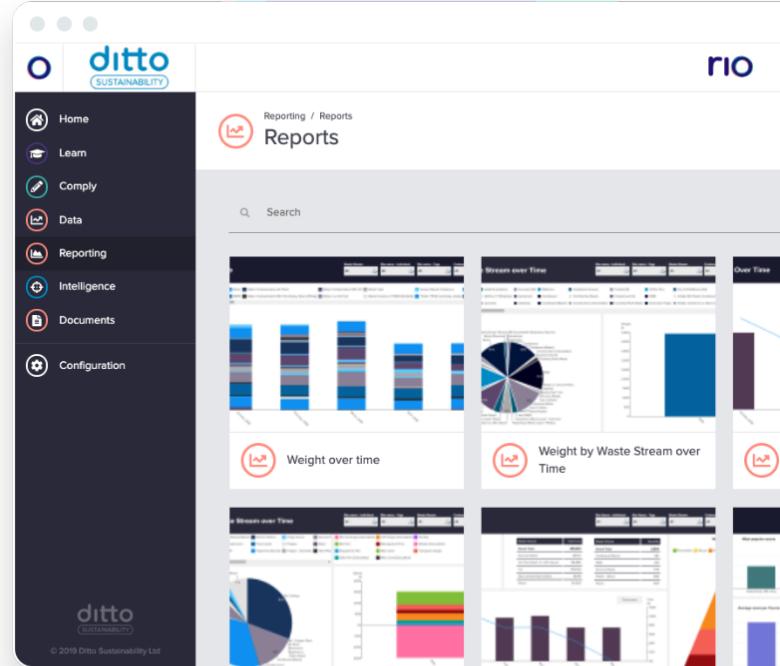

"We currently use Ditto Sustainability's software as an integral component of our resource and waste management strategy. It has helped us to educate our staff in the core principles of waste management and it's a highly visual way for us to monitor our performance against the waste hierarchy and control our expenditure in line with targets."

Juliet Thomas, Assistant Director of Estates, University of Kent.

## Data analysis

Obtaining good quality sustainability data and actually determining performance can be challenging.

This can be particularly problematic if you are operating across multiple locations, generating multiple waste streams and working with numerous service providers.

Rio can help you understand and manage your waste, water and energy data.

Contact us now.

### EAUC offer

Please contact us to see how Ditto Sustainability and Rio can help universities and colleges involved with EAUC drive performance improvement and deliver sustainability.
