

The Renewable Event

28 January 2016, 09:30 - 15:30, Cheshire

Energy cost control and storage are some of the greatest problems facing all educational institutions. It is vital that universities and colleges are able to transition to a low carbon, sustainable economy through the use of renewables and new technology.

Why should you attend?

-  A cross regional event to compare and contrast the challenges of renewable energy provision and development
-  Be part of a showcase of solutions from our corporate partner and discuss with them the questions, barriers and solutions you might require
-  Our first event to offer a chance to discuss and digest the outcomes of COP21 and its implications for the sector
-  Potential to meet with and discuss the impacts on local councils and their development of climate and energy initiatives.

This free seminar hosted by Clean Power Solutions will explore areas such as energy storage, grid connection, renewables, carbon management and new technologies. It has been designed to examine the problems facing energy managers and share solutions and expertise from other institutions.

Location: Chimneys Hotel and Conference Centre, Arclid, near Congleton, Cheshire.

For additional details on the seminar, please email Seth Kirby, sikirby@eauc.org.uk.
