A Greater Manchester University

Christmas Switch-Off

Be good (and green) this Christmas...

By switching off non-essential equipment at the plug where possible over the Christmas holidays we could help save enough energy to make 400,000 cups of tea!

Office:
computers, monitors, photocopiers, printers, fax machines, scanners, water coolers, display screens, electric heaters, lights!

Kitchen:
kettles, water boiling units, microwaves, toasters, empty fridges and lights!

Agree in your office who will switch off shared equipment on the last day!

University of Salford is committed to reducing energy consumption by 30% over the next 5 years. Find out more on the University Environmental Intranet pages accessible via Estates & Property Services Intranet.

When you come back, make energy saving your new year's resolution!
